

1.

Find the eigenvalues, eigenvectors, and diagonal representation of the Pauli matrices. Solve the first by hand, you may do the other 2 with (commented) computer calcs:

$$\hat{X} = \hat{\sigma}_1 = \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}, \hat{Y} = \hat{\sigma}_2 = \begin{bmatrix} 0 & -i \\ i & 0 \end{bmatrix}, \hat{Z} = \hat{\sigma}_3 = \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}$$

```
### python code that finds eigenvalues and eigenvectors of a Matrix
```

```
import numpy as np
```

```
from numpy import linalg as LA
```

```
def eigen(matrix):  
    eigenvalues, eigenvectors = LA.eig(matrix)  
    return eigenvalues, eigenvectors
```

more text goes here SOLUTION GOES HERE

2. Determine if the matrices given below are unitary and Hermitian.

SOLUTION GOES HERE test

```
### python code that checks if a Matrix is Hermitean
```

```
def is_hermitean(matrix):  
    return matrix == matrix.H
```
